XLink Acceptable Use Policy

Last updated Oct 21, 2026 · @Alvey

About XLink

XLink is an independent, educational privacy-pool prototype that runs only on Robinhood Chain Testnet (chain ID 46630), a test network where tokens have no monetary value. By using the XLink website or its relayer, you agree to this policy.

- **Independent:** XLink is not affiliated with, endorsed by or operated by Robinhood Markets, Inc. or any of its companies. "Robinhood Chain Testnet" is used only to name the test network the app runs on.
- **Testnet only:** the XLink smart contracts are coded to refuse deployment on any network other than Robinhood Chain Testnet or a local development chain. XLink does not operate on Robinhood Chain mainnet, Ethereum mainnet or any network with real value.
- **Unaudited prototype:** the code has not been audited and must never be used with real funds.

What XLink never does

XLink never asks for, collects or stores any login credentials or wallet secrets.

- **No credentials:** the website has no login, password, seed-phrase or private-key fields, and no code that reads or transmits them.
- **No hidden signatures:** XLink never asks a wallet to sign a message, sign typed data or approve token spending. The only wallet requests are to connect, to switch to Robinhood Chain Testnet, and to send a transaction the user starts.
- **Only visible transactions:** users send two kinds of transaction, a deposit into a pool or a withdrawal from it. Each one shows its exact amount in the user's own wallet and needs the user's approval.
- **No hidden charges:** the service fee is shown on screen before payment and is recorded on the public block explorer.
- **The user's secret stays with the user:** the withdrawal note is created and used in the user's browser and is never sent to XLink's servers or relayer.
- **No third-party scripts:** all scripts and fonts are served from XLink's own server.

Acceptable use

You may use XLink only for lawful purposes, to learn about and test zero-knowledge privacy on a test network.

You must not use XLink, its website or its relayer to:

1. Break any applicable law or regulation, or move or hide the proceeds of any crime.
2. Evade economic sanctions. You may not use XLink if you are a sanctioned person, or are located in or ordinarily resident in a sanctioned country or region.
3. Commit fraud, run scams, or mislead anyone about who you are or what XLink is.
4. Impersonate XLink, Robinhood or any other person or organisation, including by copying this site to collect wallet secrets or payments.
5. Infringe copyrights, trademarks or other intellectual property rights.
6. Attack the website, relayer or contracts, including denial-of-service attacks, scanning, or attempts to gain unauthorised access.
7. Upload, link to or distribute malware, or send spam that promotes XLink or anything else.
8. Use XLink with real funds, or present it to others as a service for real funds.

You are responsible for following the laws that apply where you live.

The relayer

The XLink relayer is a small program that submits withdrawal transactions to Robinhood Chain Testnet on a user's behalf and pays the testnet gas. It is not a proxy, VPN or general traffic relay.

- **What it accepts:** one kind of request, a finished withdrawal proof for one of the five XLink pools. It rejects anything else.
- **What it sends:** only that withdrawal transaction, to an XLink pool contract on Robinhood Chain Testnet. It does not forward web traffic, email or any other network traffic.
- **What it can't do:** it can't change where funds go, because the recipient address is fixed inside the proof. It never receives the user's note.
- **Checks before sending:** it simulates each withdrawal first and refuses any that would fail. It refuses to run on any network other than Robinhood Chain Testnet.

Fees, trademarks and testnet terms

- **Service fee:** each deposit pays a 10% service fee on top of the pool amount. For example, a 1 ETH deposit costs 1.1 ETH. The fee is shown on screen before payment, is sent in the same transaction to the XLink fee address 0x60F4F86176BE98AD437d8FC1dbe4ad444224E231, and is publicly visible on the block explorer. Withdrawals pay out the full pool amount with no fee.
- **Trademarks:** "Robinhood" and "Robinhood Chain" are trademarks of their owner. XLink uses them only to name the network it runs on, and claims no connection to their owner.
- **Testnet only:** testnet ETH has no monetary value. Do not send real funds to any XLink address or contract.
- **No warranty:** XLink is an unaudited prototype provided as is, without any warranty. Notes that are lost can't be recovered, and the contracts have no way to reverse or recover transactions.

Reporting abuse and enforcement

Report misuse of XLink, including sites that copy or impersonate it, to [contact email]. Include the URL or transaction link and what you saw.

- **Response:** we review every report and reply within [number] business days.
- **What we can do:** we can stop the relayer from submitting withdrawals, change or take down the website, and report illegal activity to the relevant authorities and to our hosting provider.
- **What we can't do:** the pool contracts have no administrator controls, so we can't freeze, block or reverse transactions on the chain.
- **Changes to this policy:** we may update this policy at any time. The date at the top shows the latest version.
